

AddisPulse Media

A SMART MOBILITY ADVERTISING BRAND BY BLUECORE SOFTWARE PLC

Smart Mobility Advertising & Lead Generation Platform

Strategic business proposal prepared for partners, investors,
and launch clients.

**Launch
Market:**
Addis Ababa,
Ethiopia

Operating Model:
Hybrid adtech + field
operations

Launch Entity:
Bluecore
Software PLC

Date:
May
2026

Document Purpose

Business definition: AddisPulse Media is a smart mobility advertising and lead-generation platform that helps brands reach premium urban passengers through QR-powered in-car campaigns, passenger rewards, verified lead capture, and real-time campaign reporting.

This document consolidates the original in-car digital marketing concept into an investor-ready, partner-ready, and client-ready business proposal. It positions AddisPulse Media as a separate market-facing brand owned and operated by Bluecore Software PLC during the launch phase, without requiring a separate business license at the beginning.

The proposal is designed to support three conversations: internal partner alignment, investor discussion, and client selling. It explains the market logic, product model, technology layer, launch budget, priority clients, operating system, risks, and implementation roadmap.

Table of Contents

1. Executive Summary	Business logic and investment case
2. Market Problem and Opportunity	Why Addis Ababa needs measurable offline advertising
3. Brand Strategy	Name, positioning, and market meaning
4. Product and Customer Experience	Passenger journey and campaign formats
5. Target Client Priorities	Recommended first sectors to pursue
6. Technology Platform	Dashboard, QR tracking, lead verification, automation
7. Driver Network and Operations	Recruitment, vetting, training, incentives, control
8. Pilot Plan and Unit Economics	15-day proof-of-concept and campaign economics
9. Pricing and Revenue Model	Packages and monetization paths
10. Launch Budget	Controlled setup plan below 500,000 ETB
11. Go-to-Market Strategy	Sales motion and partner approach
12. Investor Thesis	Why this can scale beyond a service business
13. Risk, Compliance, and Governance	Practical control measures
14. Implementation Roadmap	90-day and 12-month execution plan
15. Appendices	Client pitch, driver standards, reporting template, references

1. Executive Summary

AddisPulse Media will begin as a separate brand under Bluecore Software PLC, focused only on Addis Ababa during the first phase. The company will build a controlled network of trained ride-share and taxi drivers, then convert selected vehicles into premium micro-media spaces where advertisers can reach passengers and collect verified leads.

The first product is not simple vehicle advertising. The stronger category is **measurable urban attention**. AddisPulse connects physical mobility with digital measurement: a passenger sees a branded in-car experience, scans a unique QR code, engages with a fast mobile landing page, submits a verified contact, and receives an offer or brochure by SMS or WhatsApp. The advertiser receives campaign analytics and qualified leads.

interactions

The core market gap

Many advertisers in Addis Ababa spend on billboards, posters, radio, influencers, and social media without clear proof of who saw the message, who became interested, and who is ready to buy. AddisPulse fills that gap by combining offline attention with online tracking and lead capture.

Launch position

- **Brand:** AddisPulse Media.
- **Owner/operator:** Bluecore Software PLC during launch phase.
- **Market:** Addis Ababa only for the first stage.
- **Model:** Hybrid advertising service plus software platform.
- **Initial asset:** Driver network, campaign tracking technology, advertiser relationships, and operational discipline.
- **Budget posture:** Lean setup below 500,000 ETB, with campaign operating costs ideally financed by signed client revenue.

Strategic recommendation: AddisPulse should sell the first pilot to one high-value client before scaling costs. The best first client should be a real estate developer, bank/fintech provider, private university, or private healthcare group because these sectors value verified leads and can calculate return on investment.

Why investors should care

The business can start as a campaign service, but its long-term value is a repeatable platform: advertiser dashboard, driver network, QR attribution, lead verification, campaign templates, and performance reports. That makes AddisPulse more defensible than ordinary advertising agencies.

2. Market Problem and Opportunity

The problem with traditional advertising

Outdoor advertising in Addis Ababa can create visibility, but it usually has weak measurement. A billboard may look impressive, yet the client often cannot know exactly how many qualified customers responded. Radio and print can build awareness but struggle to prove conversion. Social media can be measured, but competition is crowded and many premium local consumers are not equally active across platforms.

Visibility without proof

Traditional outdoor media is seen by many people, but client-level lead data is usually weak.

Digital reach gaps

Digital adoption is growing, but social media reach remains smaller than mobile reach.

Lead quality problem

Advertisers need contacts that can be called, segmented, followed up, and converted.

Why the timing is favorable

Ethiopia has a strong mobile base but still has a gap between mobile connectivity and deep internet or social media reach. DataReportal reported 93.2 million cellular mobile connections in Ethiopia in late 2025, 29.5 million internet users, and 9.80 million social media user identities. This makes a hybrid offline-online model attractive because it does not depend only on social media exposure.

Ethio telecom also reported 87.1 million total telecom customers and 49 million mobile data and internet users in the first half of the 2025/26 fiscal year. This supports the practical use of mobile landing pages, SMS, WhatsApp follow-up, and QR-based campaign journeys.

The Addis Ababa opportunity

Addis Ababa has dense traffic, growing ride-share usage, high-value commercial zones, and many businesses competing for attention. The vehicle ride is a rare environment where the passenger has time, the message can be presented respectfully, and the response can be captured immediately.

Market insight: The winning promise is not "we will show your ad." The winning promise is "we will bring you verified customer interest from premium urban passengers, with data you can measure."

Category definition

AddisPulse should define its own category in Ethiopia: **Smart Mobility Media**. This means advertising, lead generation, campaign analytics, and customer acquisition delivered through moving urban spaces.

3. Brand Strategy

Recommended brand name: AddisPulse Media

The selected name is strong for the Ethiopian market. "Addis" connects naturally to Addis Ababa, the launch city, while also carrying the meaning of "new." "Pulse" communicates movement, life, rhythm, city energy, and real-time data. "Media" keeps the business understandable for clients and investors.

Brand meaning

AddisPulse Media means new city energy, measurable attention, and real-time market response.

Investor meaning

A media network that can evolve into a software-enabled marketplace between brands, drivers, and urban passengers.

Positioning statement

AddisPulse Media helps brands turn everyday mobility into measurable customer acquisition through QR-powered vehicle campaigns, passenger rewards, verified lead capture, and live performance reporting.

Tagline options

- **Advertising where the city moves.** Best for broad market communication.
- **Move attention into action.** Best for investor and technology positioning.
- **Smart ads. Real leads. Citywide movement.** Best for client pitches.

Brand personality

- **Modern but not noisy:** Premium, clear, and professional.
- **Local but scalable:** Born in Addis Ababa, built for Ethiopian cities.
- **Data-driven but human:** The passenger experience should feel hospitable, not aggressive.
- **Trusted by clients:** Strong reporting, clean vehicles, respectful drivers, and consent-based data collection.

Suggested visual direction

Use a deep navy base, warm brown/gold accent, and light blue-white backgrounds. This fits Bluecore ownership while allowing AddisPulse to have its own city-media identity. The brand should feel urban, premium, and measurable, not like a generic taxi sticker business.

4. Product and Customer Experience

The passenger journey

Experience principles

- **Hospitality first:** The vehicle should be clean, fresh, respectful, and comfortable.
- **Self-service engagement:** The passenger should never feel pressured. The driver introduces the offer politely, then lets the passenger decide.

- **Reward every campaign:** Water, treat, coupon, discount, or small benefit should be available because rewards improve scan behavior and brand warmth.
- **Fast mobile experience:** Landing pages must load quickly and use simple forms. The first campaign should not ask for more than name, phone number, and optional interest type.
- **Consent and trust:** The passenger must know who will contact them and why.

Campaign formats

Lead generation campaign

QR landing page with offer, form, OTP verification, and client dashboard. Best for real estate, finance, schools, and healthcare.

Product launch campaign

In-car display material, short video landing page, coupon claim, and product demo request. Best for electronics, telecom, subscriptions, and consumer brands.

Appointment campaign

Passenger selects preferred call-back time or appointment category. Best for clinics, diagnostics, schools, and training centers.

Brand awareness plus survey

Passenger sees brand story and answers 2-3 market questions. Best for research, CSR, NGOs, and public campaigns.

Required in-car materials

- Seat-back organizer or premium card holder.
- Campaign card with QR code and short offer.
- Complimentary water/treat or campaign-specific reward.
- Driver script card.
- Driver ID and vehicle verification sticker.
- Optional exterior sticker for higher-budget campaigns.

Golden rule: AddisPulse must never look cheap inside the car. If the setup looks weak, premium clients will not trust the channel. A clean and controlled presentation is part of the product.

5. Target Client Priorities

The first customers should not be chosen randomly. AddisPulse should focus on sectors where one converted customer is valuable enough to justify campaign spending. The priority list below is designed for Addis Ababa launch conditions.

Rank	Sector	Priority	Why it matters	Best campaign objective
1	Real estate developers	Very high	High-ticket sales, need site visits and qualified buyers, strong ROI case.	Site visit bookings, call-back requests, brochure downloads.
2	Banks, fintech, insurance	Very high	They need verified contacts for accounts, loans, cards, digital wallets, and insurance products.	Product inquiries, branch appointments, agent follow-up leads.
3		High		

Rank	Sector	Priority	Why it matters	Best campaign objective
	Private universities, schools, and training centers		Admissions marketing is lead-driven and seasonal; parents and working adults are reachable in cars.	Admission inquiries, campus visit bookings, scholarship/registration interest.
4	Private hospitals, clinics, diagnostics	High	Health services need trusted, appointment-oriented outreach without aggressive mass advertising.	Appointment requests, package inquiries, call-back leads.
5	Telecom, electronics, subscriptions, DSTV	High	Product launches need urban visibility, demos, coupons, and direct contact capture.	Coupon claims, plan inquiries, demo requests.
6	Hotels, resorts, travel, events	Medium-high	Good for seasonal promotions and diaspora/tourism campaigns.	Booking inquiries, event interest, package downloads.
7	NGOs, CSR, public awareness campaigns	Medium	Useful for credibility and impact, but pricing may be lower than commercial clients.	Survey completions, awareness participation, hotline traffic.
8	FMCG, beverages, retail	Later stage	Strong scale potential, but needs more vehicles and sampling logistics to be profitable.	Coupon scans, product trials, brand lift surveys.

Recommended first 10 client targets

1. Luxury and mid-market real estate developers.
2. Private universities and professional training centers.
3. Banks promoting digital accounts, loans, cards, and merchant services.
4. Insurance companies promoting vehicle, health, and life insurance.
5. Private hospitals, diagnostics centers, and specialty clinics.
6. Telecom/internet and subscription providers.
7. Electronics retailers and smartphone/device importers.
8. Hotels, resorts, and travel agencies targeting diaspora and business travelers.
9. Event organizers and entertainment promoters.
10. Large retailers or supermarkets launching loyalty programs.

Best first client: Real estate. The economics are easiest to prove. If one apartment buyer or serious site visit comes from the campaign, the client can justify the spend.

6. Technology Platform

The Bluecore advantage

AddisPulse should be marketed as a media brand, but its defensibility comes from Bluecore's software capability. Other people can print QR codes. The serious advantage is the operating system behind the campaign: tracking, fraud control, lead verification, reporting, and client visibility.

Core technology components

Campaign landing pages

Fast mobile pages with client branding, short video/image, offer, form, consent checkbox, and call-to-action.

Unique QR attribution

Each vehicle/driver receives a unique QR link so scans and leads can be tied to a specific driver, location group, and campaign.

Lead verification

OTP, duplicate detection, invalid number filtering, consent tracking, and time-stamped lead records.

Client dashboard

Live report showing scans, leads, cost per lead, driver performance, campaign days, exportable lead list, and final summary.

Driver operations panel

Telegram MVP first, then mobile app: daily photos, inventory status, leaderboard, warning notices, and bonus tracking.

Automation layer

SMS/WhatsApp follow-up, PDF brochure delivery, sales notifications, and client CRM exports.

Recommended MVP architecture

Driver QR code -> Passenger mobile landing page -> Lead form and consent -> Verification/ filtering -> SMS/WhatsApp response -> Advertiser dashboard -> Sales follow-up/export

Minimum dashboard metrics

- Total scans and unique visitors.
- Total leads and verified leads.
- Lead conversion rate from QR scan to form submission.
- Best-performing drivers and underperforming drivers.
- Daily campaign performance trend.
- Estimated cost per verified lead.
- Lead status: new, contacted, appointment set, converted, rejected.
- Export to Excel/PDF for client reporting.

Fraud control features

- One phone number counted once per campaign.
- OTP or call-back verification for qualified leads.
- Flag repeated submissions from the same device or driver.
- Compare driver scans with daily passenger and inventory estimates.
- Random lead audit calls by campaign coordinator.
- Disable or penalize suspicious driver QR codes.

7. Driver Network and Operations

Driver acquisition strategy

The business should register as many drivers as possible, then select only the most reliable ones for paid campaigns. AddisPulse should not promise clients that every registered driver is campaign-ready. The registered pool is inventory; the vetted pool is the product.

Driver selection criteria

- Clean vehicle interior and exterior.
- Good driving behavior and passenger communication.
- Smartphone access and ability to use Telegram/WhatsApp.
- Willingness to follow script, reporting, and setup rules.
- High activity in target zones: Bole, Kazanchis, Sarbet, Old Airport, CMC, Megenagna, Summit, and similar areas.
- Agreement to daily photo reporting and random audits.

Driver incentive model

Component	Purpose	Suggested approach
Base participation fee	Keeps drivers committed during campaign	Flat payment per campaign period after compliance checks.
Verified lead bonus	Rewards real performance	Small bonus per verified lead above threshold.
Top-driver prize	Creates competition	Weekly leaderboard bonus for top 3 drivers.
Compliance score	Protects brand quality	Drivers lose bonus for dirty setup, fake leads, missing photos, or poor conduct.

Operations rhythm

- **Daily:** Driver sends setup photo before starting campaign rides.
- **Every 3 days:** Inventory restock and vehicle condition check.
- **Weekly:** Driver performance review and bonus calculation.
- **End of campaign:** Driver payout after data and compliance audit.

Operational truth: The driver network is not a side detail. It is the supply chain. If drivers are weak, the whole business looks weak. Selection, training, and control are investor-grade priorities.

8. Pilot Plan and Unit Economics

Baseline pilot design

The first proof-of-concept should stay focused and controlled. The original concept proposed a 15-day pilot using 20 vetted ride-share vehicles, with an estimated 12 premium passengers per car per day. That creates an estimated reach of 3,600 premium passenger interactions.

Metric	Baseline assumption
Fleet size	20 vetted vehicles
Campaign duration	15 days
Passengers per car per day	12 premium passengers
Total estimated passenger interactions	20 x 12 x 15 = 3,600
Operating zones	Bole, Kazanchis, Sarbet, Old Airport, CMC, Megenagna, Summit, and airport/business routes.
Campaign objective	Verified leads, appointment bookings, brochure downloads, or coupon claims.

Baseline pilot hard cost

Expense item	Calculation	Cost ETB
Driver base incentives	20 cars x 2,500 ETB	50,000
Passenger inventory	3,600 passengers x 15 ETB water/treat average	54,000
Physical branding	Seat organizers, QR boards, print cards	10,000
Software and SMS automation	Hosting, short links, SMS/WhatsApp/API credits	10,000
Operational staffing	Fleet and inventory coordinator for pilot	10,000
Baseline pilot cost	15-day proof-of-concept hard cost	134,000

Success KPIs

- Minimum 3,600 estimated passenger exposures.
- Target QR scan rate: 8 percent to 20 percent depending on reward strength and offer quality.
- Target lead conversion from scans: 25 percent to 45 percent for strong offers.
- Target verified leads: 100 to 300 in first pilot.
- Final client report delivered within 72 hours of campaign close.

What must be proven

Client demand At least one serious client pays for measurable leads rather than free exposure.	Passenger participation Passengers scan and submit contacts when the reward and message are clear.
--	--

Driver compliance

Drivers follow setup, script, reporting, and cleanliness requirements.

Data credibility

The dashboard accurately shows scans, leads, drivers, and verified results.

9. Pricing and Revenue Model

AddisPulse should avoid one fixed price. Different clients have different objectives and budgets. The business should sell packages that combine media exposure, lead generation, operations, and reporting.

Package	Scope	Price range	Best use
Founding Pilot	15 days / 20 cars / one client / 3,600 estimated premium passenger interactions	220,000 - 280,000 ETB	First case study, dashboard, final report, lead export.
Growth Campaign	30 days / 40-60 cars / stronger lead target / weekly reporting	420,000 - 650,000 ETB	Best for real estate, schools, banks, hospitals.
Premium Launch	30-45 days / 100+ cars / sampling, PR, video recap, display options	750,000 - 1,500,000+ ETB	Best for large product launches and national brands.
Performance Lead Model	Setup fee + verified qualified lead fee	100,000 ETB setup + 150-500 ETB per lead	Use only after tracking and fraud controls are proven.

Baseline unit economics

Scenario	Client price	Estimated hard cost	Estimated gross profit	Approx. gross margin
Minimum first-client discount	180,000 ETB	134,000 ETB	46,000 ETB	26 percent
Recommended founding pilot	220,000 ETB	134,000 ETB	86,000 ETB	39 percent
Stronger commercial pilot	280,000 ETB	150,000 ETB	130,000 ETB	46 percent
Growth package example	500,000 ETB	250,000 ETB	250,000 ETB	50 percent

Recommended pricing discipline

- Do not sell the first pilot below 180,000 ETB unless it is a powerful case-study client.
- Use 220,000 ETB as the baseline founding-pilot ask.
- Charge extra for video production, professional photography, product sampling, exterior stickers, and deep follow-up calls.
- For real estate, add success-based fee for booked site visits or converted buyers if the client agrees.

- Ask for at least 70 percent payment before campaign launch to avoid financing client campaigns from Bluecore cash.

10. Launch Budget

The launch budget should stay lean. The goal is to prepare the brand, office, driver onboarding, sales materials, and MVP platform without burning cash before the first client campaign is sold. Campaign inventory should increasingly be paid from client advance payments.

Budget item	Description	Estimated ETB
Brand identity, pitch materials, launch design	Logo usage, deck, sample campaign mockups, printed sales folder	35,000
Office setup and rent buffer	Small working office, deposit/rent buffer, basic utilities	115,000
Furniture and equipment	Desks, chairs, printer, basic camera/phone support, router, minor fixtures	110,000
Legal, accounting, basic contracts	Driver agreement, client proposal template, privacy notice, retainer support	35,000
Platform infrastructure	Hosting, domain, SMS/API test credits, analytics tools, dashboard MVP support	45,000
Driver recruitment and training	Registration campaign, inspection days, ID badges, training materials	45,000
Pilot operating reserve	Inventory pre-purchase, coordinator stipend, local transport, emergency restock	80,000
Contingency reserve	Unplanned repairs, printing, extra inventory, small operational gaps	40,000
Estimated launch allocation	Controlled launch budget before client-funded campaign scale-up	490,000

Budget control rule: Office spending must not eat the business before revenue begins. The first 90 days should prioritize sales, driver onboarding, landing page/dashboard MVP, and campaign proof - not a luxury office.

Recommended cost-saving decisions

- Operate under Bluecore Software PLC during launch instead of forming a new company immediately.
- Use a small office or shared workspace until at least three paid campaigns are completed.
- Let Bluecore build the MVP internally to reduce development expense.
- Start with Telegram/WhatsApp operations instead of a full driver app.
- Print premium but limited materials for the first pilot only.
- Use client advance payments to purchase passenger inventory and campaign materials.

What the first 500,000 ETB should achieve

- A credible brand identity and sales presentation.
- A working landing page and advertiser dashboard MVP.
- At least 100 registered drivers and 20 campaign-ready vehicles.
- One signed pilot client or a strong pipeline of 3-5 high-probability clients.
- Enough operational reserve to execute the first campaign professionally.

11. Go-to-Market Strategy

Sales strategy

AddisPulse should sell directly to decision-makers, not junior marketing staff only. The strongest buyer is usually an owner, general manager, marketing manager, sales director, or business development head. The pitch should focus on verified leads and measurable customer acquisition.

First 60-day sales motion

Step 1 - Build proof assets: demo landing page, sample QR, sample dashboard, driver setup photo mockup, sample final report.

Step 2 - Create sector-specific offers: real estate site visit offer, school admission offer, bank product offer, healthcare appointment offer.

Step 3 - Direct outreach: target 50 high-value companies and request 20 meetings.

Step 4 - Close one pilot: offer founding-client pricing with case-study benefit and limited availability.

Step 5 - Publish result: use the first campaign report as proof for the next five clients.

Sales message by sector

Sector	Best sales message
Real estate	"We bring you verified prospects who can book site visits directly from the ride."
Education	"We help you reach parents and working adults during admission season with trackable inquiries."
Finance	"We generate consent-based contacts for your product team and show cost per lead clearly."
Healthcare	"We promote packages and appointments respectfully, with interested patients choosing to be contacted."
Subscriptions/electronics	"We turn product awareness into coupon claims, demo requests, and call-back leads."

Partnership channels

- Ride-share driver communities and taxi associations.
- Digital marketing agencies that need offline activation support.
- Real estate brokers and property sales teams.
- Printing and branding companies for materials.
- SMS/WhatsApp gateway providers.

- Event organizers and business expos.

12. Investor Thesis

AddisPulse begins as a lean service, but the investor story is a platform. The company can grow from campaign execution into a measurable media network with proprietary driver relationships, campaign data, lead systems, and advertiser dashboards.

Why the model can scale

Low asset ownership

AddisPulse does not need to buy vehicles. It uses partner drivers and focuses capital on technology, operations, brand, and sales.

Repeatable campaign system

Once templates, dashboards, contracts, and driver controls are built, campaigns can be repeated across sectors.

Data moat

Performance history by sector, route, time, driver, and offer becomes valuable intelligence for future pricing.

Expansion paths

The same model can later expand to delivery bikes, buses, cafes, malls, elevators, universities, events, and regional cities.

Illustrative 12-month revenue path

The table below is not a guarantee. It is an execution model showing how revenue could grow if AddisPulse closes campaigns consistently and reinvests in driver supply, sales, and dashboard capabilities.

Period	Campaign volume	Average price	Revenue ETB	Estimated delivery cost ETB	Gross profit ETB
Quarter 1	2 campaigns/month	220,000 ETB	1,320,000	804,000	516,000
Quarter 2	4 campaigns/month	320,000 ETB	3,840,000	1,920,000	1,920,000
Quarter 3	6 campaigns/month	450,000 ETB	8,100,000	3,645,000	4,455,000
Quarter 4	8 campaigns/month	550,000 ETB	13,200,000	5,940,000	7,260,000
Year 1 illustrative total	Scale depends on sales execution	-	26,460,000	12,309,000	14,151,000

Potential investor use of funds

- Build full advertiser dashboard and driver operations system.
- Expand verified driver pool from 100 to 500+ drivers.
- Hire sales and campaign operations staff.
- Develop premium campaign inventory and display tools.
- Create stronger data protection, CRM, and reporting infrastructure.

- Run showcase campaigns with high-profile anchor clients.

Investor-grade narrative: AddisPulse is not selling empty ad space. It is building a measurable urban customer-acquisition network that converts city movement into trackable demand.

13. Risk, Compliance, and Governance

The business handles passengers, drivers, advertisers, brand reputation, and personal contact data. That means strong controls are not optional. They are part of the product.

Risk	Control measure
Driver fraud or lazy execution	Unique QR per driver, OTP validation, duplicate detection, daily setup photo, surprise audits, leaderboard bonuses.
Low scan participation	Reward every campaign, short driver script, clear offer, fast landing page, attractive branded card.
Client doubts ROI	Define KPIs before launch, provide live dashboard, weekly report, lead export, and final business case.
Privacy and data misuse	Consent checkbox, privacy notice, limited data fields, controlled exports, no resale of personal data.
Inventory leakage	Three-day restock cycle, scan-to-stock reconciliation, coordinator inspection, daily photos.
Brand damage from poor vehicles	Vehicle inspection, cleanliness standard, driver code of conduct, removal after repeated failure.
Regulatory uncertainty	Operate under Bluecore at launch, review advertising, tax, contract, SMS, and data protection requirements before scaling.

Data protection principles

Because AddisPulse collects names and phone numbers, campaigns must follow privacy-by-design principles. Ethiopia's Personal Data Protection Proclamation No. 1321/2024 creates an important legal context for transparent and responsible handling of personal information. AddisPulse should therefore use a simple consent notice, collect only necessary data, protect access, and avoid selling passenger data outside the campaign purpose.

Required policy documents before launch

- Client campaign agreement.
- Driver participation agreement.
- Driver code of conduct.
- Passenger privacy notice.
- Data retention and deletion policy.
- Lead handover protocol.
- Campaign refund and cancellation policy.

Governance structure

Role	Main responsibility
Bluecore leadership	Brand ownership, strategic decisions, finance oversight, legal compliance.
AddisPulse business lead	Sales, client relationships, campaign quality, revenue growth.
Technology lead	Landing pages, dashboard, tracking, data security, automations.
Fleet and inventory coordinator	Driver onboarding, daily photos, stock, vehicle inspections, campaign discipline.
Client success/reporting officer	Reports, lead exports, client communication, performance review.

14. Implementation Roadmap

Timeframe	Key activities	Expected output
Days 1-15	Finalize brand, build MVP landing page, create client deck, prepare driver agreement, design sample campaign.	Demo-ready brand and sales kit.
Days 16-30	Register 100+ drivers, inspect vehicles, shortlist first 20, train drivers, prepare inventory kit.	Launch-ready driver pool.
Days 31-45	Pitch Tier 1 clients, close first pilot, configure campaign landing page and tracking.	Signed pilot client.
Days 46-60	Run 15-day campaign, monitor daily, provide interim report, optimize script and offer.	Verified campaign data.
Days 61-90	Publish case study, improve dashboard, close 2-3 new campaigns, expand to 40-60 cars.	Repeatable revenue model.
Months 4-6	Introduce advertiser dashboard, stronger driver app features, referral program, sales partnerships.	Platform foundation.
Months 7-12	Expand routes, add screens/sampling options, sign annual retainers with anchor clients.	Scalable media network.

Immediate next actions

1. Finalize AddisPulse Media brand identity and one-page pitch.
2. Create a live demo landing page for one sample real estate campaign.
3. Build a basic dashboard showing scans, leads, driver rank, and campaign summary.
4. Prepare driver registration form and vehicle inspection checklist.
5. Prepare client proposal and pricing sheet.
6. Start driver registration with a target of 100 drivers.
7. Shortlist 20 vehicles for the first campaign.
8. Pitch 10 real estate developers and 10 private education/finance/healthcare companies.
9. Close one founding pilot before spending heavily on campaign inventory.
10. Document the first campaign as a case study.

Decision gates

Gate 1: Before pilot launch

Client signed, payment received, drivers trained, landing page tested, dashboard tested, inventory ready.

Gate 2: Mid-pilot review

Scan rate, lead quality, driver compliance, inventory usage, client satisfaction, and fraud signals reviewed.

Gate 3: After pilot

Final report, client testimonial, case study, revised pricing, decision on expansion to 40-60 vehicles.

Gate 4: After 3 paid campaigns

Decide whether to formalize AddisPulse as a separate company, hire dedicated staff, and seek external investment.

15. Client-Ready Sales Pitch

One-minute pitch

AddisPulse Media helps your brand reach premium passengers across Addis Ababa through clean, reward-based in-car campaigns. Each vehicle carries your campaign QR code, passengers scan voluntarily, submit their contact with consent, and your team receives verified leads and a performance report. You do not only buy visibility - you buy measurable interest from real people.

What the client receives

- Branded in-car campaign setup across selected vehicles.
- Campaign-specific QR code and mobile landing page.
- Passenger reward mechanism.
- SMS/WhatsApp follow-up link or brochure delivery.
- Verified lead export.
- Live or periodic dashboard access.
- Weekly performance update for longer campaigns.
- Final report with recommendations.
- Campaign photos for proof of execution.

Client objections and responses

Client objection	Recommended answer
"How do we know people will scan?"	We use passenger rewards, short driver introduction, strong offer design, and a simple QR journey. The pilot report will show actual scans and leads.
"How do we trust the leads?"	We use unique QR attribution, duplicate filtering, consent capture, and verification steps. Suspicious driver activity is flagged.
"Is this better than social media?"	It is not a replacement. It is a complementary channel that captures offline attention and converts it into measurable digital leads.

Client objection	Recommended answer
"Why cars?"	Because the passenger has time, the setting is personal, and the message can be presented with hospitality rather than noise.
"What if we do not get sales?"	We define success metrics before launch. For high-ticket sectors, even a small number of qualified leads can justify the campaign.

16. Driver Training Standard

Driver welcome script

"Welcome. This ride is supported by AddisPulse Media and our campaign partner today. You will find a QR code and small refreshment in the back. If the offer interests you, you can scan the code and request more information. Participation is completely optional."

Driver rules

- Do not force passengers to scan.
- Do not collect passenger numbers manually unless instructed by AddisPulse.
- Keep the car clean and the campaign materials visible.
- Send setup photo every campaign day before starting.
- Report inventory honestly.
- Do not replace or damage campaign materials.
- Do not submit fake leads.
- Respect passengers and avoid political, religious, or sensitive arguments during campaign discussions.

Vehicle inspection checklist

Item	Pass/Fail	Comment
Interior clean and odor-free		
Seat-back campaign material visible		
Driver understands campaign script		
QR code tested successfully		
Inventory kit received		
Driver ID/verification completed		
Telegram/WhatsApp reporting tested		

17. Sample Campaign Report Structure

Every client campaign should close with a professional report. This is what makes AddisPulse different from informal promotion work.

Report sections

1. Campaign overview: client, objective, dates, vehicle count, zones.
2. Creative assets used: QR card, landing page, brochure, reward type.
3. Reach estimate: vehicles, campaign days, estimated passenger interactions.
4. Digital engagement: scans, unique visitors, form starts, form submissions.
5. Lead quality: verified leads, duplicate leads removed, invalid numbers removed.
6. Driver performance: top drivers, underperforming drivers, compliance notes.
7. Time and location insights: best days, best zones, best offer response.
8. Cost analysis: cost per scan, cost per verified lead.
9. Sales follow-up status: contacted, pending, appointment set, converted where available.
10. Recommendations for next campaign.

Sample campaign dashboard fields

Metric	Definition	Why it matters
Total scans	Total QR visits recorded	Measures initial engagement.
Unique visitors	Estimated unique devices/users	Reduces duplicate inflation.
Verified leads	Leads passing phone/duplicate/consent checks	Main client value.
Cost per lead	Campaign cost divided by verified leads	Useful against other channels.
Driver ranking	Leads and compliance score by driver	Controls operations and payouts.
Conversion status	Client sales team update after follow-up	Shows business outcome beyond marketing.

18. Final Recommendation

AddisPulse Media should launch as a lean, premium, measurable mobility advertising brand under Bluecore Software PLC. The business should begin with a tight 15-day pilot in Addis Ababa using 20 carefully selected vehicles, then expand only after a successful paid case study.

Final strategic direction: Start with real estate, education, finance, and healthcare clients. Sell verified leads, not decoration. Build driver discipline early. Use rewards to increase passenger participation. Use Bluecore's software strength to make the campaign measurable. After three paid campaigns, formalize AddisPulse as a stronger standalone brand and prepare for investment.

The disciplined launch formula

- **One city:** Addis Ababa.
- **One clear brand:** AddisPulse Media.

- **One operator:** Bluecore Software PLC at launch.
- **One first product:** In-car QR lead-generation campaigns.
- **One proof point:** A paid pilot with measurable verified leads.
- **One growth path:** Turn service execution into a software-enabled media network.

Partner approval note

Decision item	Status / comment
Brand name	AddisPulse Media
Launch entity	Bluecore Software PLC
Initial market	Addis Ababa only
Launch model	Hybrid adtech and field operations
First target sector	Real estate, followed by education, finance, and healthcare
Budget ceiling	Target below 500,000 ETB for setup, with campaign costs supported by client advances

Disclaimer

This proposal is a strategic business planning document. Financial projections are illustrative and depend on sales execution, client pricing, driver availability, regulatory requirements, and campaign performance. Before full commercial launch, AddisPulse Media should obtain professional legal, tax, and data protection advice suited to the final operating model.
